Cybersecurity

**[NOTE] Important Note:** This PDF contains sample questions with complete answers and explanations. Visit [SolveMyQues.com](https://SolveMyQues.com) for our complete question bank, interactive tests, and detailed performance tracking!

### Question 1:

HTTPS provides encryption for web communications.

**[ANSWER] Answer & Explanation:**

True. HTTPS encrypts data transmitted between web browsers and servers using SSL/TLS protocols.

### Question 2:

What does SQL injection attack target?

**[ANSWER] Answer & Explanation:**

SQL injection attacks target database systems by inserting malicious SQL code into application queries.

### Question 3:

Which HTTP header helps prevent clickjacking attacks?

**[ANSWER] Answer & Explanation:**

X-Frame-Options header prevents clickjacking by controlling whether a page can be embedded in frames.

#### Question 4:

Cross-Site Request Forgery (CSRF) attacks can be prevented using tokens.

#### [ANSWER] Answer & Explanation:

True. CSRF tokens help verify that requests are legitimate and originate from the intended user.

#### Question 5:

The \_\_\_\_\_ vulnerability allows attackers to inject malicious scripts into web pages.

#### [ANSWER] Answer & Explanation:

Cross-Site Scripting (XSS) allows attackers to inject malicious scripts into web pages viewed by other users.
